

**G**enerates a Visual  
Innovation

Vewell

Generates a Visual Innovation

# Why Vewell

Vewell has been founded with the mission of providing the innovative and the best visual solutions for the world's most demanding environments. Vewell has concentrated efforts on Large-screen LCD Displays, Tiled Video Wall Displays, Touch Screens for end users and integrators who are seeking high quality image experience.

**Professional**

Vewell has been committed to LCD/monitors only, spending all efforts on R&D and manufacturing about new technologies of visual solutions. Not only products, but offers a full complete solution of professional LCDs and plasma displays for your business.

**Energy Saving**

Vewell has been devoted to earth protection and global green revolution since its establishment. We have been qualified the Certificate for Energy Conservation in terms of environmental conservation, energy saving and consumption reduction.

**High Brightness**

All Vewell LCDs utilize a system of LED backlighting which is not only more energy efficient than traditional CCFL backlight, but also considerably brighter.

**Narrow Bezel Video Wall Displays**

For video wall applications, Vewell currently offers a variety of displays with different sizes which certified an almost seamless bezel (the gap between the displays of the 60" Plasma is just 1.8mm), it supports 1 x 1 to 16 x 16 wall formats without any additional support, like a distributor or external equipments, allowing you to enjoy the total convenience.

**First Class Manufacturing**

Vewell constantly upgrades manufacturing abilities and optimizes process technologies so that we can guarantee the good performance for the products and meet the needs of the world market.

*Professional quality and  
**Superior performance***

## Product Features

- Professional grade LCD displays with LED backlit with lifespan 100,000hr;
- FHD 1920x1080 display resolution makes perfect and vivid picture;
- High performance of splicing processor can expand to support larger walls and numbers of sources;
- The highest of 16x16, 256 displays free to combine;
- PC expansion slots, easy to input/output the audio video signal;
- With the smart power energy saving function, the stand-by power consumption can be 0.5W;
- Build-in fan control, cool and quiet operation;
- Products overheating shutdown protection for safety use,
- Low & High brightness versions with excellent viewing angles suitable for indoor applications;
- Designed for 24/7 usage;

Vewell display eliminates distortion, without any small angle sawtooth when viewing

High response speed, 178° wide viewing angle

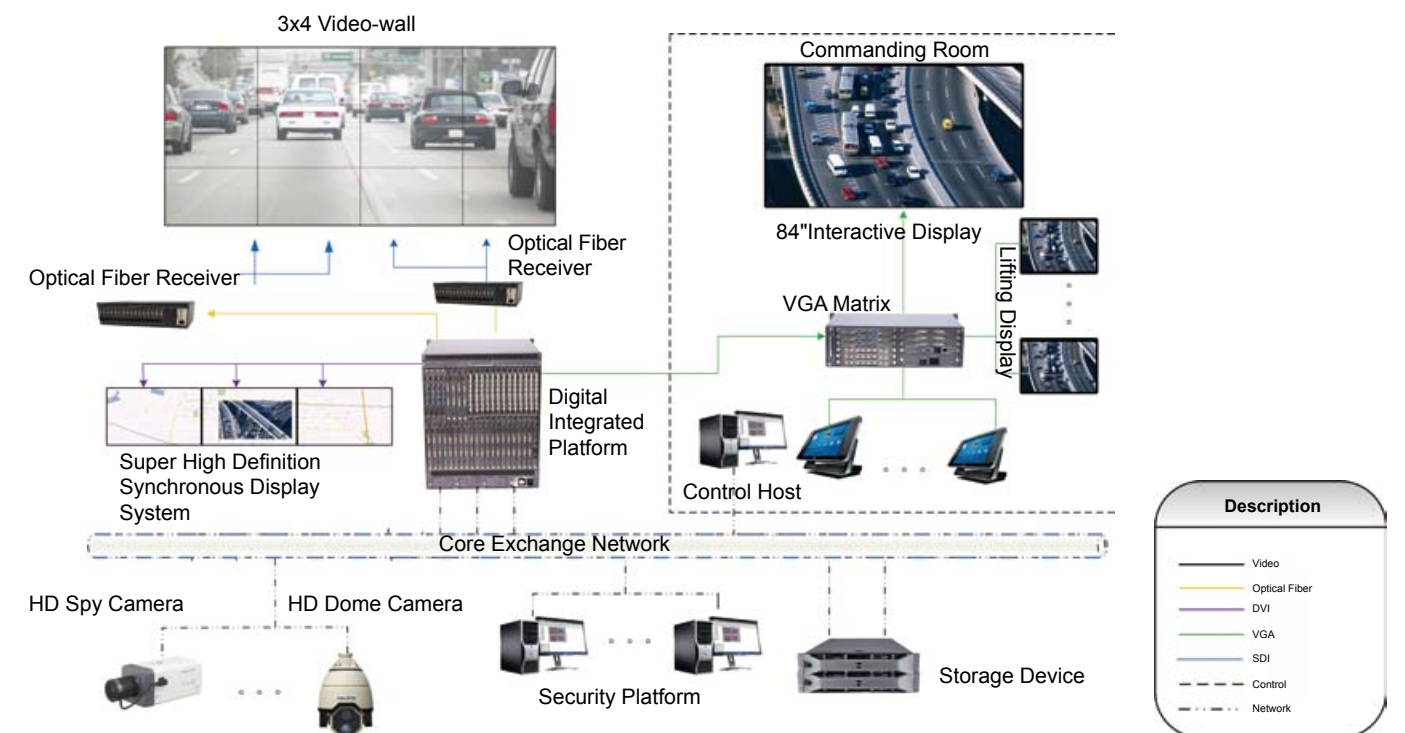

Special image processing technology to realize uniform color

LED brightness uniformity instead of nonuniform CCFL brightness

## The Topology of Monitor and Command Center

46"Super Narrow Bezel 5.7mm LED Backlit LCD Tiled Display

46-inch tiled display adopts LED full-array type backlight panel, which has more uniform brightness and vibrant colors.5.7mm for the bilateral border and unique no-image-retention design make the picture much clearer. Unique DCDi (directional correlation interlaced) progressive processing can eliminate deformation generated on edges of the images brought by scanning of interlaced video signal, which shows better overall image. 46-inch LED tiled display has no weightless undesirable phenomena, suitable for landscape or portrait or other layout, which provides customers with a variety of display modes. It can achieve the maximum 16x16 wall format, supporting 7x24 hours continuous work, which suit for advertising, information broadcasting and other industries with long-running operation. 46-inch LED tiled display has two kinds of different products in 450nit and 700nit brightness for your choice.

55"Super Narrow Bezel 5.5mm LED Backlit LCD Tiled Display

55-inch tiled display adopts LED full-array type backlight panel, which has more uniform brightness and vibrant colors. 5.5mm for the bilateral border and the top-level processing chip with Vewell video-wall software, without any additional devices, it can display pictures in single screen or areas or zoom to full-screen without any distortion. Professional calibration software equipped with the color sensor ensures the consistent light output of every display. The latest energy saving technology can save nearly 100 watts of each 55-inch tiled display. It can achieve the maximum 16x16 wall format, supporting 7x24 hours continuous work, which suit for advertising, information broadcasting and other industries with long-running operation.55-inch LED tiled display has two kinds of different products in 450nit and 700nit brightness for your choice.

60" Ultra Narrow Bezel 1.8mm High Brightness Plasma Tiled Display

60-inch tiled display adopts plasma panel with brightness up to 1700nit, which can restore the true color effect. 1.8mm for the bilateral border creates the ultimate video wall with screens that are seamlessly connected and picture perfect. 60-inch tiled display has auto white-balance adjustment function; the color consistency can be achieved by adjusting the white balance through the software. Built-in temperature sensor device can feedback real-time temperature and control body temperature, as well as accurately make heat radiation. 60-inch tiled display adopts modular hardware design, which makes the maintenance much more convenient without removing the screen body. 60-inch tiled display is suitable for use in the harsh environments with great dustproof and waterproof performance.

## Product Features

- Single display applications of large sizes, 65 " , 70 " , 82 " , 84 " ;
- Professional grade LCD displays with LED backlit with lifespan 100,000hr;
- FHD 1920x1080 & Ultra HD 3840x2160 display resolution makes perfect and vivid picture;
- Aluminum frame with narrow bezel 28mm & bezel colors customized available;
- PC expansion slots, easy to input/output the audio video signal;
- With the smart power energy saving function, the stand-by power consumption can be 0.5W;
- Designed for 24/7 usage;

### High Brightness

Vewell's professional display have a higher level of brightness than that of normal LCD displays, making images appear more vivid even in bright environments, lifelike details remain visible and clear.

### High Contrast Ratio

Vewell's professional displays have higher contrast ratio than those of a normal television, which can enrich the depth and realism of the image.

### Contrasted with the front frame

The temperature of screen and front frame tested by thermal imager is dropped 7.6 degrees by modifying the air ducts and fans

### Gray scale response time

With a gray scale response time of less than 8ms, it effectively enhances the moving image's display effect, and eliminates the problem of smear marks, thus presenting the images more smoothly.

### Wider View Angle

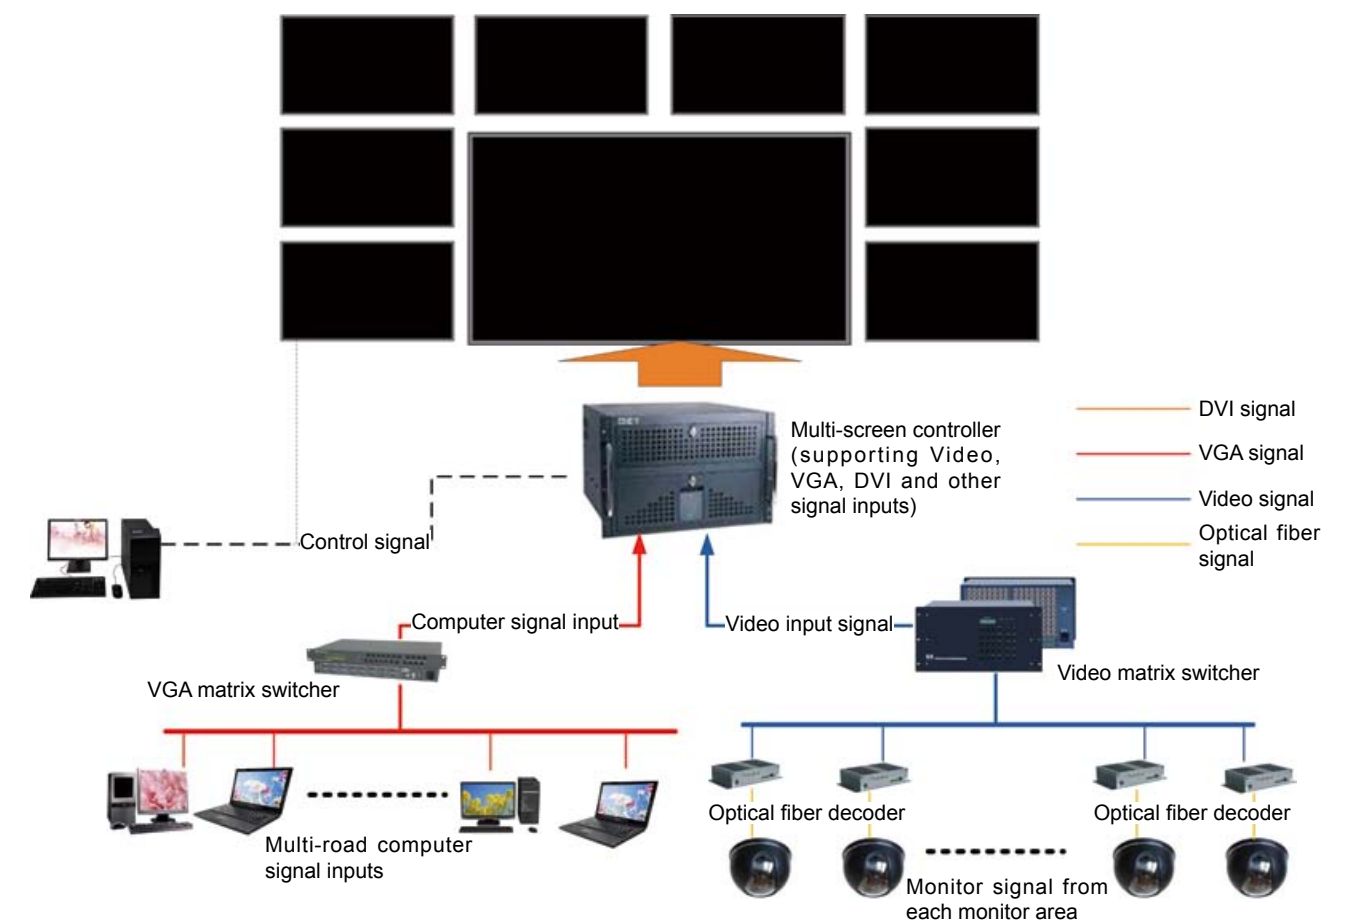

With a viewing angle extending more than 178 degrees (both vertically and horizontally), it provides the audience with the option of simultaneous viewing and can be used to meet a variety of different viewing needs.

### Comparison of back-case tested by thermal imager (at the fan)

The temperature of the back-case (at the fan) is dropped 10.2 degrees by modifying the air ducts and fans

## The Topology of Supervisory Control Application

65” Professional LED Backlit LCD Display

65-inch professional display adopts LED full-array type backlight panels, with more delicate image quality and clearer definition. Ultra-narrow bezel design features a 28mm to bezel width, which let the appearance much thinner, narrower and lighter. Professional industry LED panel can achieve energy saving and longer life. 65-inch professional display supports 7 \* 24 hours of continuous work, which provides the stable information broadcasting solutions to the airports, subways, stores, public places, hotels and other places.

# Digital Signage System

Vewell multimedia information broadcasting and management software could download videos, pictures, texts, control information and play list to the local disk of the Net Player, and also could download special content and playlist for each Net Player.

Vewell CS Information Broadcasting software

Vewell CS information broadcasting software is a kind of management software that could manage hundreds of net players through networks and accomplish all kinds of play tasks with high performance. These net players are connected with LCD TVs, and have been comprehensively applied to video information in malls and buildings, and also the training and video conference in the National Stadium.

### Application Project

#### Airport

An airport Information Broadcasting system could broadcast the airport introduction, security inspection information, security inspection video, weather forecast, travel guidance, scenic spots promotion, hotel service promotion, commercial activities brief, stock market data, product ads, special catering and tourism program, thus provide passengers with more appropriate, comprehensive and vivid information service.

#### Subway

Relying on multimedia network technology, and based on computer system, displays in stations and on vehicles could act as the media to provide information service for passengers. Under normal circumstances, Passenger information system could provide traveling notice, service time, arriving and departing time, train schedule, administration notice, governmental notice, traveling reference and other information.

#### Bank

The electronic screen directly controlled by the system through network, could not only broadcast promotion videos, interest rates, product kinds and addresses of welcome, but also broadcast some tips, guides and business status for clients. This could save more time for clients, thus largely improve efficiency and the sound image of the bank.

### Telecommunications

Set up a networking multimedia information broadcasting platform and install LCD screens or plasma screens as video output terminal. Vewell information broadcasting system could broadcast business introduction, packaging service and activities in near future, by any control terminal within the internal net.

### Hospital

Vewell information broadcasting system could be used under centralized control and unified management, to deliver audio signals, images and rolling subtitles to displays through network platform, the high definition digital program could effectively cover lobby, inpatient department, waiting area, pharmacy, elevator room and other crowded places.

### Hotel

Vewell information broadcasting system could install plasma screens or LCD screens in hall, elevator room, each floor and conference rooms to broadcast hotel introduction, restaurant introduction, local tourism, conference information, travel orienting, scenery introduction, welcome for distinguished guests and world time.

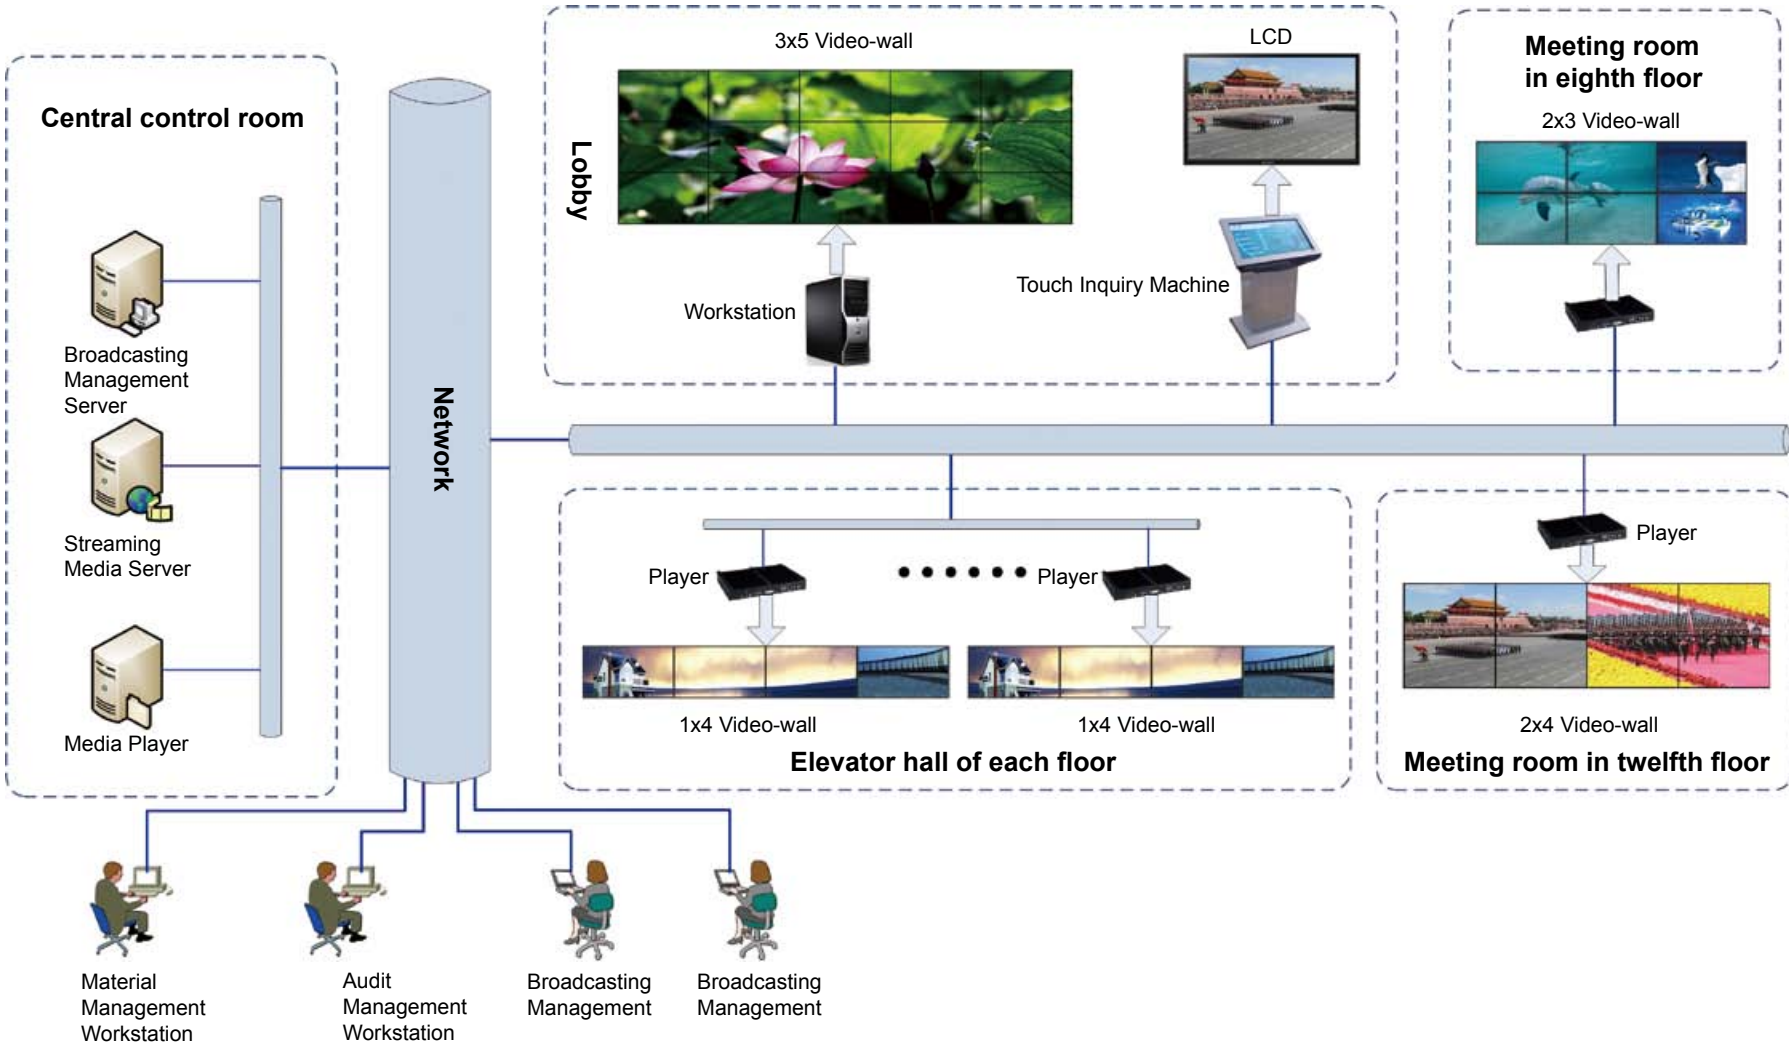

### Cinema

By arranging different LCD displays in cinemas, film outtakes, posters and prices could be advertised through information broadcasting system. Linked to the OA system of the cinema, LCD display clients around booking office could show ticket and price information in real time.

### Enterprises

Vewell information broadcasting system, with the powerful compatibility, could contain all kinds of information. Combined with a data base, exterior information, network data information, displaying, Net streaming media, TV broadcaster, media video and audio, images and other information resource, it could be applied to an interior information broadcasting system and display in all kinds of enterprises.

## Digital Signage System for New-media Building
